Enterprise Architecture for the EU AI Act

Turn the process landscape you already maintain into a documented AI inventory: where your company uses AI, kept current, with the evidence at hand.

Process Design

Enterprise Architecture

Work Orchestrator

GBTEC

The deadline moved. The work didn't.

Some AI Act duties already apply today, including rules on prohibited AI practices.
Key obligations for many high-risk AI use cases will apply from 2 December 2027.

Today

Already applies

Rules on prohibited AI practices, among other duties.

2 December 2027

High-risk use cases

Key obligations for many high-risk AI use cases.

Act now: a reliable AI inventory takes time to build. Start before the deadline, not at it.

GBTEC

Not only for companies that build AI.

The AI Act does not only concern companies that build AI.

Companies that use AI systems have duties of their own.

Build AI

Companies that develop AI

They develop AI systems and place them on the market.

Use AI

Companies that use AI

They use AI systems in their own processes, including AI built into purchased software.

Which duties apply depends on the role and the use case.
One example for companies that use AI: they take measures to support AI literacy among relevant staff.

GBTEC

Same AI. Different use. Different risk.

The same AI tool may present minimal risk when drafting marketing copy but could qualify as high-risk when used to pre-screen job applicants.

AI system

An AI assistant

Same software, same licence

Process · Marketing

Draft campaign texts and social posts

May present minimal risk

Process · HR recruiting

Pre-screen and rank job applications

Could qualify as high-risk

Why process context matters

An inventory linked to your processes shows where each AI use sits, and GBTEC Process Design already holds that link.

Illustrative example. Every AI use needs a case-by-case assessment.

GBTEC

Your application catalog. Already there.

Your processes use your applications, so they are already modelled in GBTEC Process Design. The AI Compliance Support Package builds on your existing application catalog and Process Design repository.

Already in GBTEC Process Design

- Processes and activities, end to end
- Your application catalog
- Links: which activity uses which application
- Roles and process owners

Added with the EU AI Act Compliance Support Package

- AI use per application and process
- Risk class with documented rationale
- Application owners and their evidence
- A dedicated EU AI Act insight and a Power BI dashboard

Get started on the data you already have: your catalog becomes the backbone of the AI inventory.

GBTEC

One call. Then a demo that fits your processes.

1

Personal call

A short call about where you stand: how AI is used in your company, your application catalog and your compliance setup.

2

Tailored demo

On this basis we prepare a demo that fits your processes.
